**Simplify planning,
monitoring and reporting.**

uFish

Enhance weighing with uFish technology

uFish is an optional application for the u4000-system, used for fish grading, single weighing, basket weighing, box weighing, and labelling. The application supports operations on up to four platforms simultaneously and can connect to printer(s) for labelling.

The application helps users monitor the simultaneous operation of multiple stations and boxes, displaying graphic filling levels to achieve target weights. It operates via a touchscreen and/or a handy remote control.

Weighing functions include:

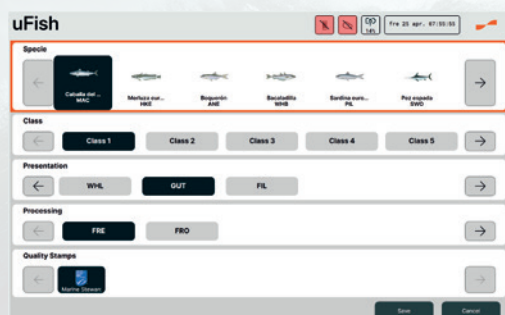

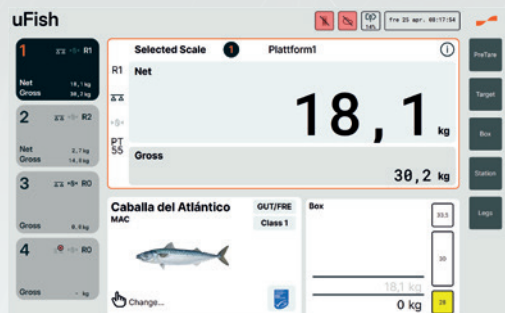

- Net / Gross / Tare
- Auto tare
- Pre-tare
- Tare weights record
- Auto summation
- Optimal target weighing
- Station weighing with target weight and filling indication
- Partial weighing, supporting alternating stations and gradings
- Box weighing, including target weight with filling indication

Printing and reporting functions include:

- Ship names and numbers
- Species
- Grading
- Class
- Preservation
- Processing
- Quality logos

Other features:

- Use of customized labels
- Fish selection by list
- Fish species language selection
- Multiple platforms weighing

uBridge

Master marine monitoring with uBridge

uBridge is a real-time monitoring and reporting software that seamlessly connects to all onboard scales and uFish systems.

The software features a variety of modules and tools that support the planning, monitoring, and reporting of traceable fishing activities, including grading, weighing, batching, and labelling.

The uBridge software allows you to easily manage missions and hauls, providing a controlled overview and detailed information on catches and production, such as ship ID, crew, fishing gear, and harbour.

Modules include:

- **Dashboard** - Offers a comprehensive overview and real-time insights into catches and production.
- **Mission** - Features planning and reporting tools.
- **Leg** - Includes time stamps, species and weights.
- **Log** - Provides a detailed catch report.
- **Produced** - Summarizes and reports on produced boxes, etc.
- **Product lists** - Allows for selecting available products and quick-selection for efficiency.
- **Label editor** - Facilitates custom label design.
- **Crew list** - Connects the crew to each mission.
- **Excel report** - Easy filing and reporting from excel sheet.

Master marine monitoring with uBridge

uCloud

Reporting made effortless

uCloud is our software solution designed for effortless reporting of your catch to authorities, organisations, or other stakeholders. As reporting becomes increasingly demanding with more regulations expected in the near future, uCloud simplifies this essential task.

Recognising the importance of reliable operations, uCloud includes a built-in backup facility. It holds a complete system backup, enabling quick replacement of an indicator if necessary.

With uCloud, all necessary data from your missions and hauls is collected efficiently. It also allows for the aggregation of data from multiple ships for comprehensive reporting.

Potential users who would benefit from uCloud include:

- Shipping companies
- Fish merchants
- Skippers
- Authorities

Access and report your data online with uCloud
